

The diagram shows a circuit connection. On the left, a red line with a diamond symbol at its start leads to a blue square. This square is connected to an inductor symbol (a series of three loops). The inductor is connected to another blue square, which then connects to a long red horizontal line. This line leads to a third blue square, which is connected to the top of a rectangular component. Below this component is a ground symbol consisting of three horizontal lines of decreasing width.
